

## EnVision Video Experiences

User Interface (UI) platform and services that enable Endavo clients to deliver amazing video experiences across the web to multiscreen viewers

- **Launch Fast.** Proprietary framework, along with website and application development services, designed to enable OTT Video Services Platform clients to create, launch and manage their own branded video service user interfaces (UI), integrated with Endavo Media Management System (EMMS)
- **DIY and Go!.** Video service site-builder using our website framework allows clients to launch “out-of-box” video sites directly from EMMS
- **Custom Design.** Custom development and hosting services for uniquely designed video web service portals and microsites
- **Deliver Multiscreen.** Comprehensive OTT video application design and development services for custom iOS (iTunes) and Android (Google Play) apps, integrated with EMMS and existing services for a seamless user experience
- **Next Gen TV.** Custom design and implementation services for publishing services to Roku, LG Smart TV and certain hybrid IPTV/OTT set-top boxes with device authentication

## Success-Driving Services

- We can provide local or cloud infrastructure and all the capacity you need to deliver high-volume, local or global, video websites and native device applications
- We can provide UI design assistance, pulling from our experience in building video websites and applications
- We are certified iOS, Android, and OTTtv developers, so we can help expedite implementation, submission and approval for new applications
- We provide highly-responsive, ongoing website and application support to help drive user experience success
